

## recovery program choices

Recovery in mental health is a process, a way of life, an attitude. It can be about regaining control, or reclaiming a sense of power, purpose and value, as well as living the life you want to lead. The Recovery Program provides a range of services to support you in this process.

There are many ways you can get involved in the program, because different approaches suit different people at different times. You will be able to choose the options that suit you or we can provide support with deciding what approach to take. The choice is yours.

## we'd like to hear from you

We value feedback on what we do. Please let us know if there is something we're not offering that you think would be helpful.

# recovery program

# “social connection, routine and structure – it really helped.”

## recovery program: at a glance

Recovery is about finding what works for you. Connection, purpose, meaning, hope: these are different things for different people.

The team in our Recovery Program will work with you to find an activity of interest. Options include:

- Groups
- Vocational
- Health and lifestyle
- Cognitive

## groups

Run to the school term, the Groups Program is a combination of online and in person activity. There are many reasons to join a Group; you might like to connect with others, work on your coping or living skills, add routine to your week, or discover new interests! There is something for everyone, including creative minds, understanding physical health, beach outings and spending time with animals.

We also love to mix the timetable up and try new things, so please let us know if you have ideas.

“I learnt how to  
have gratitude  
for challenging  
things in my life.”

## vocational

Our vocational specialists can provide one-on-one support for all things work and study, including:

- Career counselling
- Course search (VTAC and SEAS)
- Pathways planning
- Job search coaching
- Resume writing
- Cover letters
- Interview preparation

## health and lifestyle

How we feel physically is a big part of our overall health and wellbeing. Mood, sleep, stress, energy levels, healthy eating and physical activity are all important to everyday life. Our practice nurse and exercise physiologists will understand what matters to you and work with you to achieve your goals. Our exercise physiologist can help with healthy eating, exercise and ways to stay active. Our practice nurse can help with quitting smoking, get up to date with vaccinations or discuss other healthcare needs.

## cognitive

Cognition is thinking skills such as memory, concentration and problem solving. A neuropsychologist can help you understand your individual strengths, and assist with building skills in areas you may find challenging.
